Attempt : 2
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: a b c -

Output: Forward Playlist: a b c

Backward Playlist: c b a

Answer

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
struct Node {  
    char item;  
    struct Node* next;  
    struct Node* prev;  
};
```

```
// Function to insert at the end
```

```
void insertAtEnd(struct Node** head, char item) {  
    struct Node* new1 = (struct Node*)malloc(sizeof(struct Node));  
    new1->item = item;  
    new1->next = NULL;  
    new1->prev = NULL;  
  
    if (*head == NULL) {
```

```

        *head = new1;
    } else {
        struct Node* tail1 = *head;
        while (tail1->next != NULL) {
            tail1 = tail1->next;
        }
        tail1->next = new1;
        new1->prev = tail1;
    }
}

```

```

// Function to display the list forward
void displayForward(struct Node* head) {
    struct Node* temp = head;
    while (temp != NULL) {
        printf("%c ", temp->item);
        temp = temp->next;
    }
    printf("\n");
}

```

```

// Function to display the list backward
void displayBackward(struct Node* head) {
    struct Node* temp = head;

    // Go to the last node
    if (temp == NULL) return;
    while (temp->next != NULL) {
        temp = temp->next;
    }

    // Print from last to first
    while (temp != NULL) {
        printf("%c ", temp->item);
        temp = temp->prev;
    }
    printf("\n");
}

```

```

// Function to free the entire playlist
void freePlaylist(struct Node* head) {
    struct Node* temp;

```

```
        while (head != NULL) {  
            temp = head;  
            head = head->next;  
            free(temp);  
        }  
    }
```

```
int main() {  
    struct Node* playlist = NULL;  
    char item;  
  
    while (1) {  
        scanf(" %c", &item);  
        if (item == '-') {  
            break;  
        }  
        insertAtEnd(&playlist, item);  
    }  
  
    struct Node* tail = playlist;  
    while (tail->next != NULL) {  
        tail = tail->next;  
    }  
  
    printf("Forward Playlist: ");  
    displayForward(playlist);  
    printf("Backward Playlist: ");  
    displayBackward(tail);  
  
    freePlaylist(playlist);  
  
    return 0;  
}
```

Status : Correct
